Mapping notes & open decisions

Your site's page structure (Home / Solutions / Agentic Systems / Approach / Contact) was built around a pure CIO-advisory narrative. Your deck is broader — three offerings (Agentic Firm Operations, Portfolio Company Transformation, and CIO Advisory), with CIO Advisory as one pillar rather than the whole story. Five open items before this goes to build:

- **Nav & positioning** — Home now leads with all three offerings. Drop the "Two Ways We Engage" section if you want to keep the site CIO-advisory-only.
- **Solutions page** — 4 card slots vs. your deck's 6 sub-services. Both a 4-card combined version and a 6-card full version are included; pick one.
- **Agentic Systems page** — deck names 6 agents; current grid holds 4. Recommend expanding the grid rather than cutting two.
- **Home "Outcomes" stats** — the old placeholder had invented percentages. No quantitative metrics exist in the deck yet, so this doc uses your real stage-based proof (Signed / Active / Pursuit) instead.
- **Client names** (Aveanna Healthcare, PRGX Global, Burns & McDonnell) — confirm you have the right to reference each publicly before this ships live.

Global elements

Company name: Quickflows.AI · **Tagline:** Agentic AI & Engineering Services for Private Equity
Founder: Shudhanshu, Founder & Managing Principal · **Entity:** Quickflows.AI LLC — Suwanee, Georgia

Element	Content
Nav	Solutions · Agentic Systems · Approach · Insights · Contact
Primary CTA	"Book a conversation" — sticky, top-right on every page
Footer contact	Quickflows.AI LLC · Suwanee, Georgia · [email / phone — insert]
Footer tagline	Quickflows.AI © 2026 · Agentic AI & Engineering Services for Private Equity
Keyword ticker	#AGENTIC AI // #PRIVATE EQUITY // #CIO ADVISORY // #PORTFOLIO OPERATIONS // #VALUE CREATION // #DILIGENCE ACCELERATION // #100-DAY PLAN // #PROJECT CONTROLS

Home

Section 1 — Hero

FULL-WIDTH HERO

Eyebrown: AGENTIC AI & ENGINEERING SERVICES FOR PRIVATE EQUITY
Headline: Turning portfolio operations into a competitive advantage.
Subhead: Reusable AI agents that cut cost, accelerate diligence, and standardize execution across the platform — deployed inside the operating partner's own workflow and inside individual portfolio companies.
CTAs: "Book a conversation" / "See how we engage"

Section 2 — The pressure on value creation has changed

4-CARD GRID

EBITDA growth can no longer rely on multiple expansion alone. Operating partners are being asked to find margin inside portfolio companies — faster than a traditional consulting engagement can deliver it.

Title	Body
Diligence takes too long	Data-room review and QoE prep still run on manual document triage, slowing time-to-close.
Fragmented back offices	Add-on acquisitions inherit disconnected ERP, project, and finance systems that never get standardized.
Blind spots in operations	Schedule slippage, compliance lapses, and cost overruns surface late — after margin is already lost.
Consulting doesn't scale	Traditional advisory engagements are project-based and don't leave reusable capability behind.

Section 3 — Two ways we engage with a PE platform

3-CARD ROW

We work directly with the firm's operating team, and inside individual portfolio companies — often both, on the same platform.

Level	Offering	What it includes
Firm-Level	Agentic Firm Operations	Deal screening & thesis-matching agents; diligence acceleration (data room triage, red-flag summaries); multi-entity portfolio monitoring & KPI rollups; LP reporting, capital calls, and waterfall support.
Portfolio-Level	Portfolio Company Transformation	Project controls automation (schedule & cost variance); AP/AR and back-office automation across ERPs; bid & proposal drafting with win-rate analysis; license & compliance monitoring for licensed trades.
Third offering	CIO Advisory	We sit in the CIO/technology-leadership seat where a portfolio company needs one — from pre-close diligence through the first 100 days. Full detail on the Solutions page.

Section 4 — Proof (replaces placeholder stats row)

3-COLUMN STAGE LIST

Our agentic components carry a track record from live commercial engagements and enterprise pursuits before we bring them to a portfolio company.

Stage	Client	Detail
Signed Client	Aveanna Healthcare	Master Services Agreement in production for provider credentialing and license monitoring across a large distributed nursing workforce.
Active Engagement	PRGX Global	Commercial engagement in progress, including contract negotiation, applying our data and workflow automation approach.
Enterprise Pursuit	Burns & McDonnell	Six-agent agentic AI suite proposed for engineering operations — schedule optimization, staffing, attrition prediction, and historical-analog estimating — built directly on our founder's prior delivery experience there.

Section 5 — Where we fit

3-CARD ROW

Our strongest reference architecture is in operationally intensive, project-driven businesses — the profile common across E&C, infrastructure, and consulting platforms.

Title	Body
Engineering & Construction	Project controls, schedule/cost variance monitoring, bid automation, and licensed-trade compliance tracking.

Infrastructure & Industrial Services	Multi-entity reporting rollups and back-office automation for roll-up platforms integrating frequent add-ons.
Consulting & Professional Services	Institutional knowledge agents and staffing/utilization optimization built on our enterprise consulting pursuits.

Section 6 — Closing CTA

"Let's Find the Agents That Move Your Portfolio" — We start with a focused review of one portfolio company's operating workflows and identify the two or three agents with the fastest path to measurable impact.

Solutions

Beyond agent deployment, we sit in the CIO/technology-leadership seat where a portfolio company needs one — from pre-close diligence through the first 100 days.

HEADER BLOCK

Eyebrow: SOLUTIONS · **Headline:** CIO Advisory for PE Portfolios

Section 2 — Solution cards

CARD GRID

Open decision: Version A (4 cards, fits current grid) vs. Version B (6 cards, true to deck 1:1, needs 2 extra grid slots).

Version A — 4 cards

#	Title	Body
001	Technology Due Diligence	Pre-close IT stack assessment — architecture, licensing exposure, technical debt, and integration risk flagged before the deal closes.
002	Fractional / Interim CIO	Bridge technology leadership during a transition, carve-out, or search — accountable for the roadmap, not just advisory hours.
003	IT Carve-Out, Integration & ERP Rationalization	Separating or merging systems, data, and vendor contracts for divestitures, add-ons, and platform consolidations. Includes a post-acquisition roadmap to consolidate overlapping ERP, PM, and finance systems inherited across add-ons.
004	Cybersecurity, Compliance & the 100-Day Plan	Risk assessment and remediation roadmap — including SOC 2 and data-privacy readiness — sized to portfolio-company scale, delivered inside a technology roadmap aligned to the deal thesis, handed to the board with clear milestones and owners.

Version B — 6 cards

#	Title	Body
1	Technology Due Diligence	Pre-close IT stack assessment — architecture, licensing exposure, technical debt, and integration risk flagged before the deal closes.
2	Fractional / Interim CIO	Bridge technology leadership during a transition, carve-out, or search — accountable for the roadmap, not just advisory hours.
3	IT Carve-Out & Integration	Separating or merging systems, data, and vendor contracts for divestitures, add-ons, and platform consolidations.
4	ERP & Systems Rationalization	A post-acquisition roadmap to consolidate overlapping ERP, PM, and finance systems inherited across add-ons.
5	Cybersecurity & Compliance Posture	Risk assessment and remediation roadmap — including SOC 2 and data-privacy readiness — sized to portfolio-company scale.
6	100-Day Technology Value Creation Plan	A technology roadmap aligned to the deal thesis, handed to the board with clear milestones and owners.

Agentic Systems

Each agent targets a specific operating cost or cycle-time lever — designed to show up directly in EBITDA, not just in a dashboard.

Section 1 — Page header

HEADER BLOCK

Eyebrow: AGENTIC SYSTEMS · **Headline:** Where Agents Create Measurable Efficiency

Section 2 — Agent cards

6-CARD GRID (2 rows of 3 — needs grid expansion from current 4)

#	Title	Targets	Body
01	Diligence & QoE Prep	Cycle time	Agents ingest data-room documents and produce first-pass financial, contract, and compliance red-flag summaries.
02	Project Controls	Cost overrun exposure	Schedule-to-cost variance agents surface early warnings across Primavera/EcoSys before slippage compounds.
03	AP / AR Automation	Back-office headcount	Invoice matching, collections follow-up, and reconciliation run continuously across ERP systems.
04	License & Compliance Monitoring	Regulatory risk	Continuous tracking of professional licenses, certifications, and renewal deadlines across a distributed workforce.
05	Portfolio Reporting Rollups	Reporting labor	Multi-entity KPI and financial consolidation replaces manual spreadsheet aggregation across portfolio companies.
06	Bid & Proposal Agents	Win rate & response time	Historical win-rate analysis and draft generation shorten the RFP response cycle for E&C portfolio companies.

Section 3 — Industry fit strip

3-CARD ROW (reused from Home)

Title	Body
Engineering & Construction	Project controls, schedule/cost variance monitoring, bid automation, and licensed-trade compliance tracking.
Infrastructure & Industrial Services	Multi-entity reporting rollups and back-office automation for roll-up platforms integrating frequent add-ons.
Consulting & Professional Services	Institutional knowledge agents and staffing/utilization optimization built on our enterprise consulting pursuits.

Section 4 — Closing CTA

Ready to see the two or three agents with the fastest path to impact for your portfolio?

Book a conversation

Approach

No lengthy IT integration project, no disruption to systems already in place, and pricing that scales with usage instead of headcount.

Section 1 — Page header

HEADER BLOCK

Eyebrow: APPROACH · **Headline:** An Engagement Model Built for Portfolio Speed

Section 2 — Engagement model

4-STEP NUMBERED LIST / TIMELINE

Replaces the old "Diagnose / Govern / Deploy / Measure" phase tracker. No week-range data exists in the deck for these four — they're properties of one model, not sequential phases, so a numbered feature list is more accurate than a dated timeline.

#	Title	Body
01	No-Integration Deployment	Agents sit alongside existing ERP, PM, and finance systems — no rip-and-replace, no core-system integration project required.
02	Usage-Based Pricing	PMPM and per-transaction pricing model — cost scales with activity, not with a fixed consulting headcount.
03	100-Day Rollout Window	First agents live inside a portfolio company's typical post-close operating window, aligned to the value-creation plan.
04	Reusable Across the Platform	Once built for one portfolio company, agentic components redeploy faster into the next add-on — the second deployment is cheaper than the first.

Section 3 — Why Quickflows

4-ITEM COMPARISON LIST (2x2 grid or stacked)

Title	Body
Agents, not headcount	We deploy software that keeps running after the engagement ends — not a team of consultants billing hours.
Reusable across the platform	Every agent is engineered as a reusable component, so the second and third portfolio company deploy faster and cheaper than the first.
Operator-built, not theory-built	Our founder delivered the ERP and project-controls systems these agents now automate — the architecture comes from lived delivery experience, not a slide template.
Aligned pricing	PMPM and per-transaction pricing ties our economics to actual usage — not a fixed retainer regardless of impact.

Section 4 — Closing CTA

We start with a focused review of one portfolio company's operating workflows and identify the two or three agents with the fastest path to measurable impact.

Insights

No deck content exists for this page. It's in the site's nav, but there are no articles or blog-style content in the deck to populate it with. Decide before build: (1) drop from nav for launch, (2) stub with "coming soon", or (3) build the full listing once 2-3 real pieces exist.

If built anyway — standard skeleton (not sourced from the deck)

Section	Component	Status
Page header	Header block	Needs headline/subhead — no deck source
Article grid	3-column card grid	No articles yet
Newsletter signup	Inline form	Reuse existing footer copy, don't duplicate
Closing CTA	Centered band	Reuse "Book a conversation" pattern

Recommendation: drop from nav for v1, add back once 2-3 pieces of real content exist.
